DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-45 and 47-75 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claim 52 is objected to because of the following informalities: In line 12, of claim 52, "10" should be changed to --to--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-45 and 47-75 are rejected under 35 U.S.C. 102(b) as being anticipated by Yang et al, (Yang), U.S. Patent Pub. No. 2002/0041566.

Regarding claims 1-45 and 47-75, Yang discloses measuring, in real-time, interference metrics associated with links between a wireless communication node and a plurality of client nodes (0032); and real-time scheduling, based on said interference metrics, communications between said wireless communication node and said plurality of client nodes to reduce service level variability among said plurality of client nodes

Art Unit: 2617

(0018, 0022, 0032, 0035, 0039); wherein the wireless communication node performs the real-time scheduling on behalf of the client nodes, and wherein wireless communications between a pair of client nodes transit through the communication node (0018, 0022, 0032, 0035, 0039; figure 3).

Yang further discloses a scheduling algorithm using priority queue to schedule bandwidth. The priority is determined by the amount of interference the mobile devices are experiencing in addition to their QoS (0042, 0045).
